## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**Claims 1, 4, 5, 7, 10, and 11** are rejected under 35 U.S.C. 102(b) as being anticipated by **Milstead (5,480,226)**. **Milstead** discloses a burner mechanism (22) for a rotary kiln (12) for the production of cement clinker including replaceable protection shields (44) made of heat resistant steel and are spaced above and below the burner flame (24); the burner shields include cooling channels (4b) for passage of cooling media.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Claims 1 and 3-6** are rejected under 35 U.S.C. 103(a) as being unpatentable over **Kramlehner (4,090,841)**. **Kramlehner** discloses a burner (6) having a movable burner protection shield (12, 13) where part of the shield is under the burner (SEE Figure 1), the shield has a greater width than the burner and includes cooling channel (16) for passage of a cooling media and is discharged into roller (1). The parts are made of chrome-nickel steel. The recitation that the burner is for a rotary kiln for the production of cement clinker and that the burner is axially movable through a stationary kiln outlet has not been given patentable weight because it has been held that a preamble is denied the effect of a limitation where the claim is drawn to a structure and the portion of the claim following the preamble is a self-contained description of the structure not depending for completeness upon the introductory clause. *Kropa v. Robie*, 99 USPQ 478 (CCPA 1951). It would have been obvious at the time the invention was made to a person having ordinary skill in the art to which the subject matter pertains to have incorporated the burner equipment of **Kramlehner** into a rotary kiln for the purpose of burning cement clinker.

***Allowable Subject Matter***

**Claims 2, 8, 9, and 12** are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
